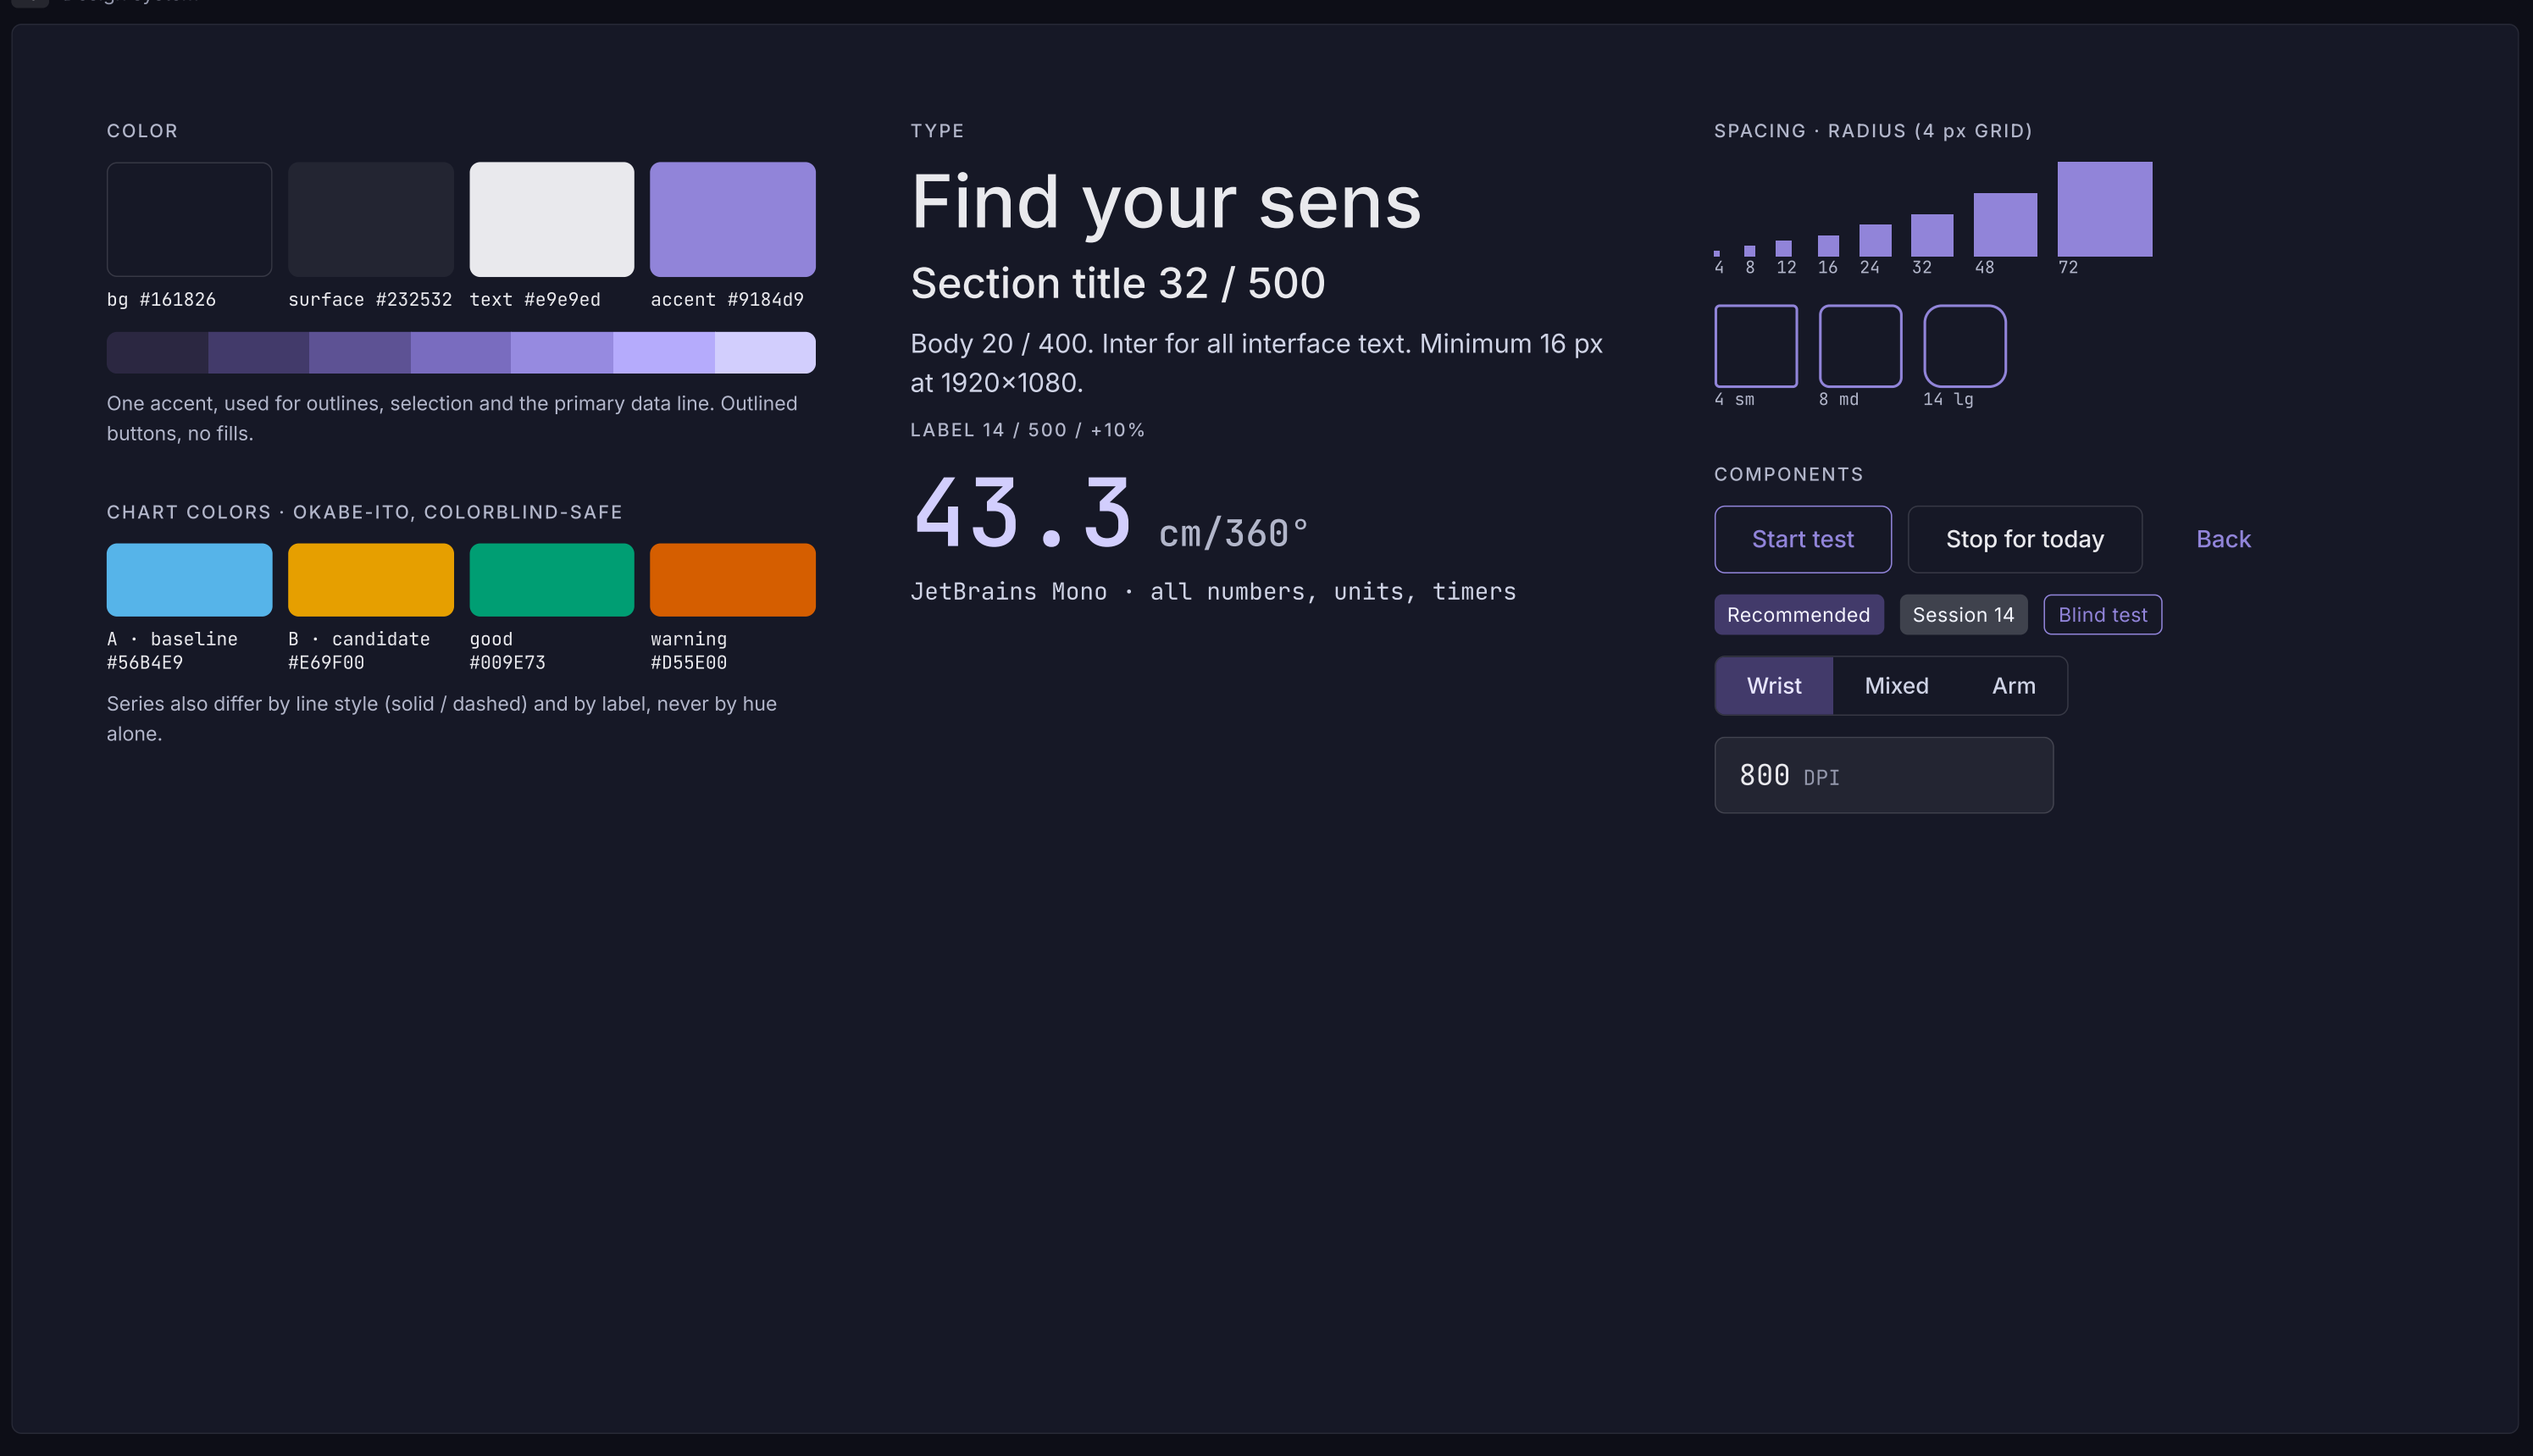
1 AimTune: design system and 12 screens (1920×1080). Built on Nocturne; adds a monospace numeric face and Okabe-Ito chart colors.

1a Design system



COLOR

One accent, used for outlines, selection and the primary data line. Outlined buttons, no fills.

CHART COLORS · OKABE-ITO, COLORBLIND-SAFE

Series also differ by line style (solid / dashed) and by label, never by hue alone.

LAST RECOMMENDATION · 12 OCT

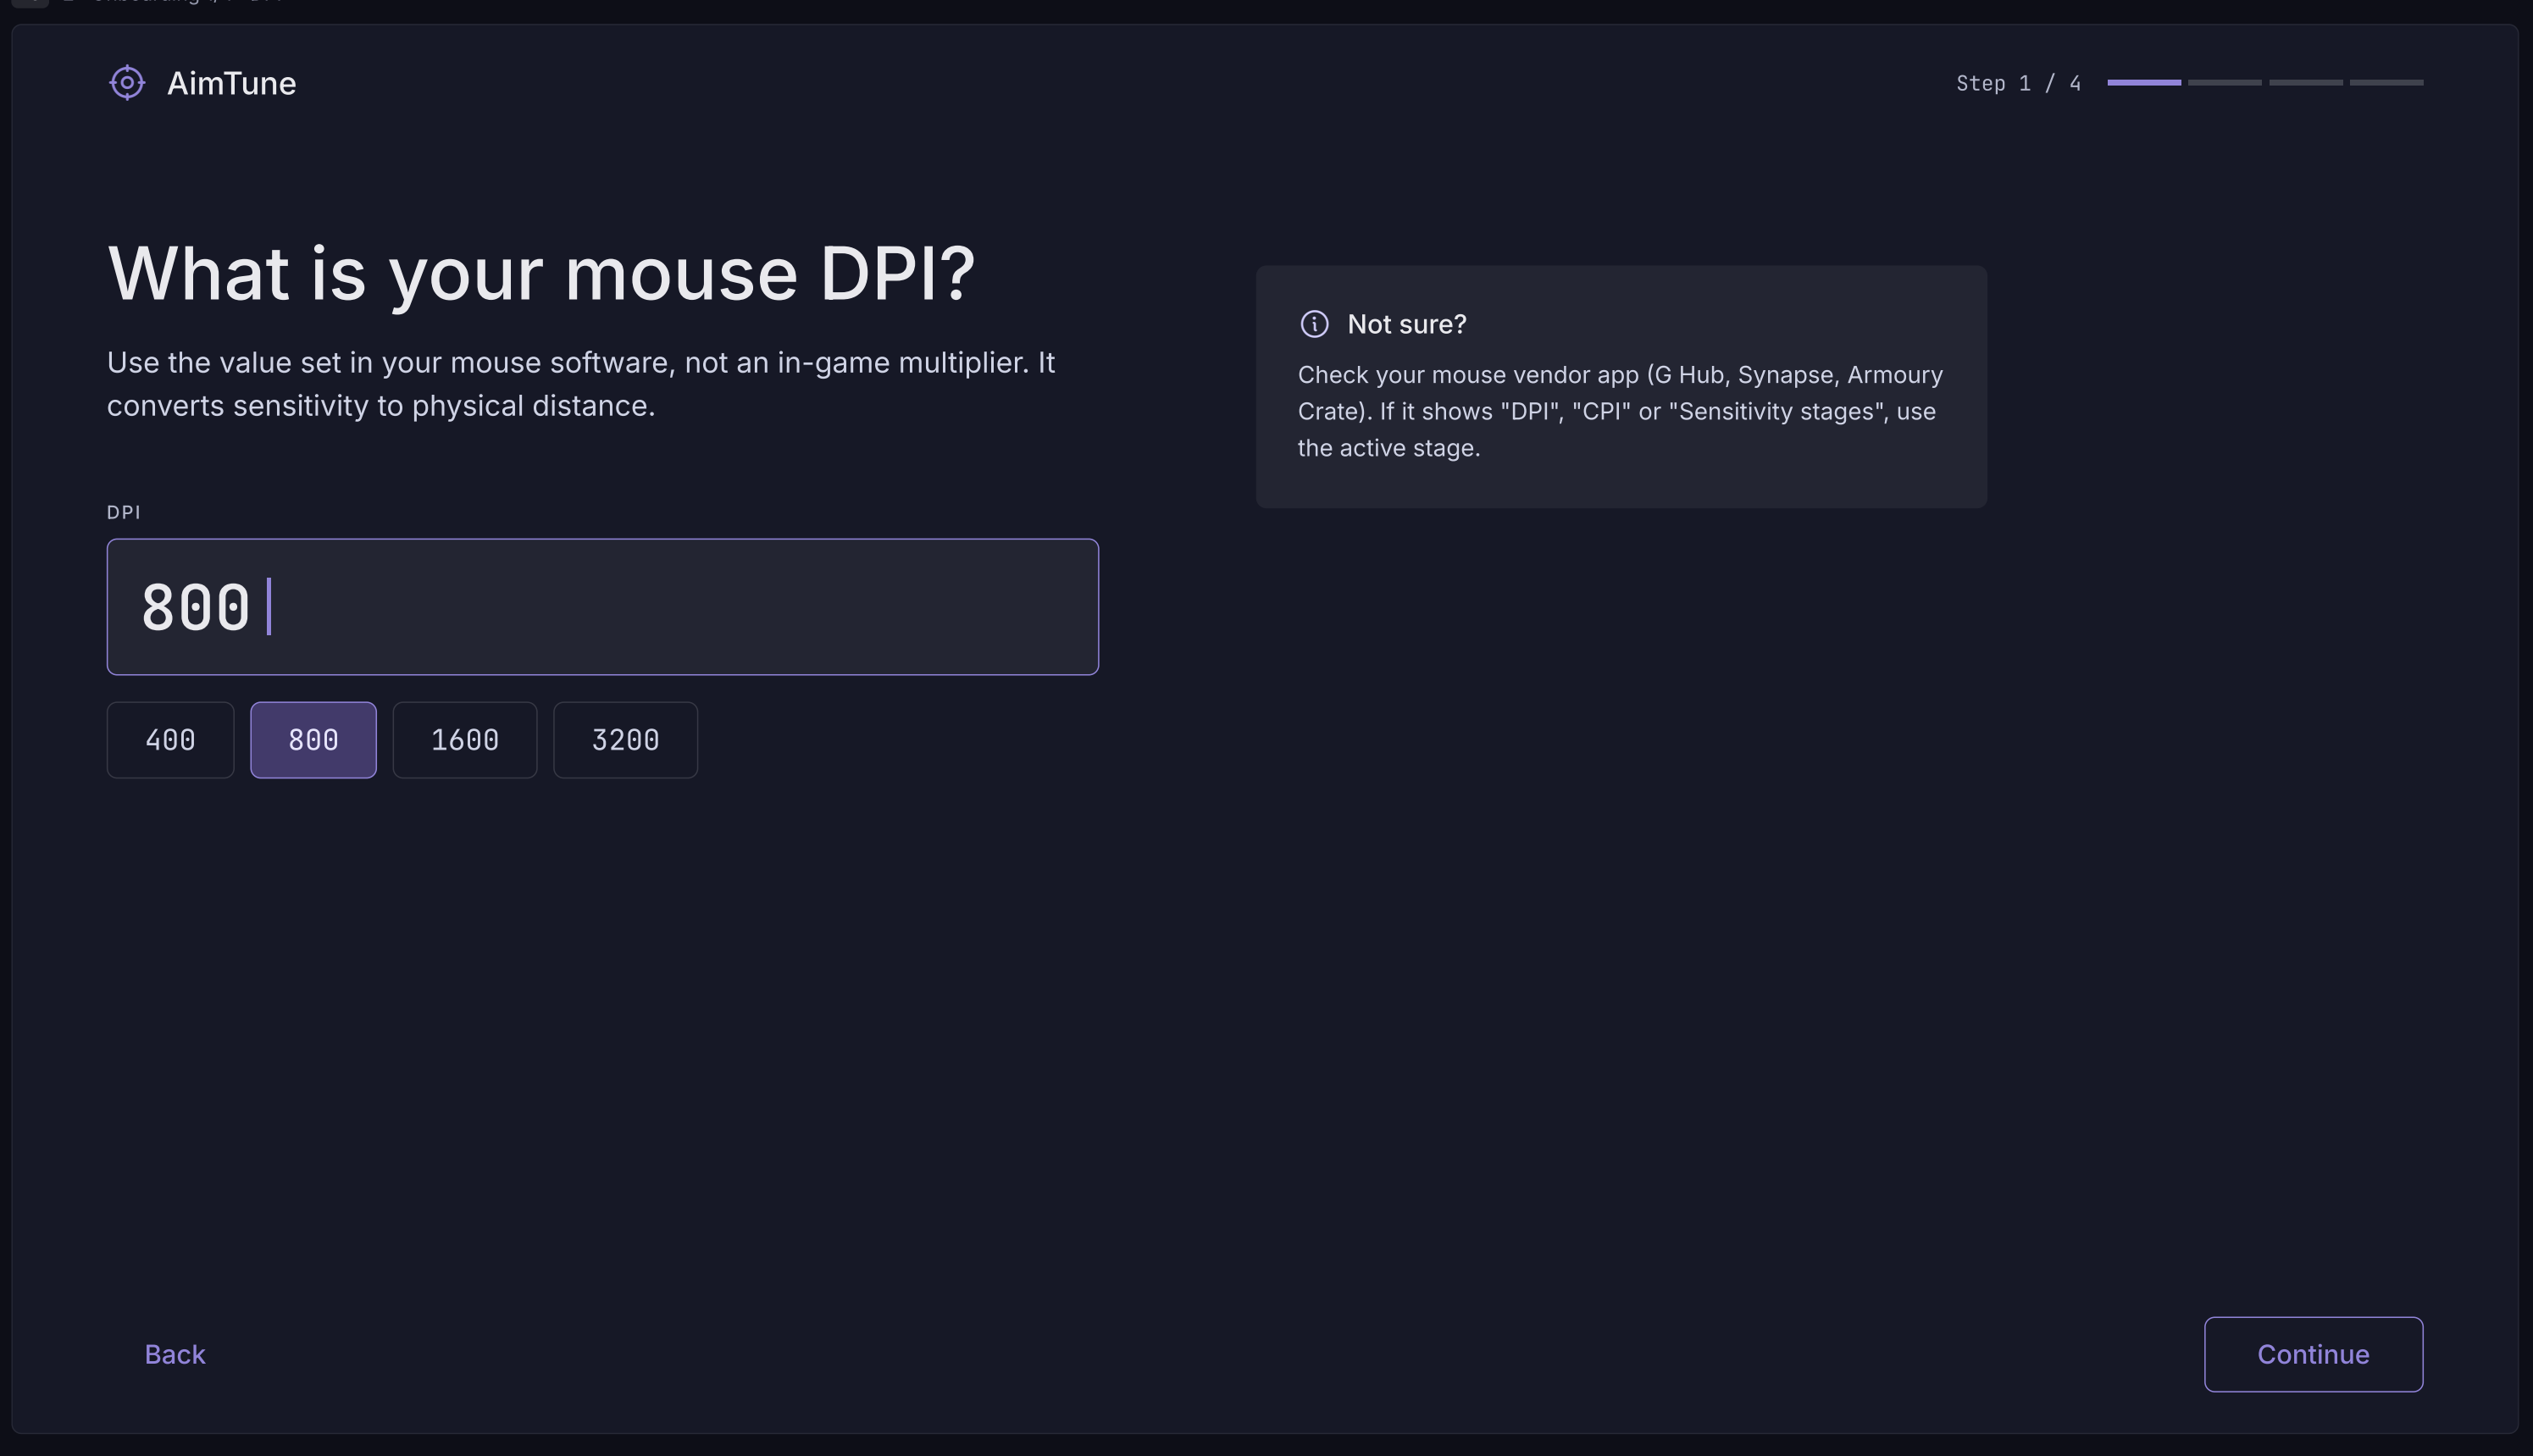
41.9 cm/360°

Counter-Strike 2	Confidence	Rounds
1.24	82 %	46

Profile: 800 DPI · mixed aim · large pad. Pointer acceleration: off.

Open source · MIT Raw Accel export supported

1c 2 · Onboarding 1/4 · DPI



What is your mouse DPI?

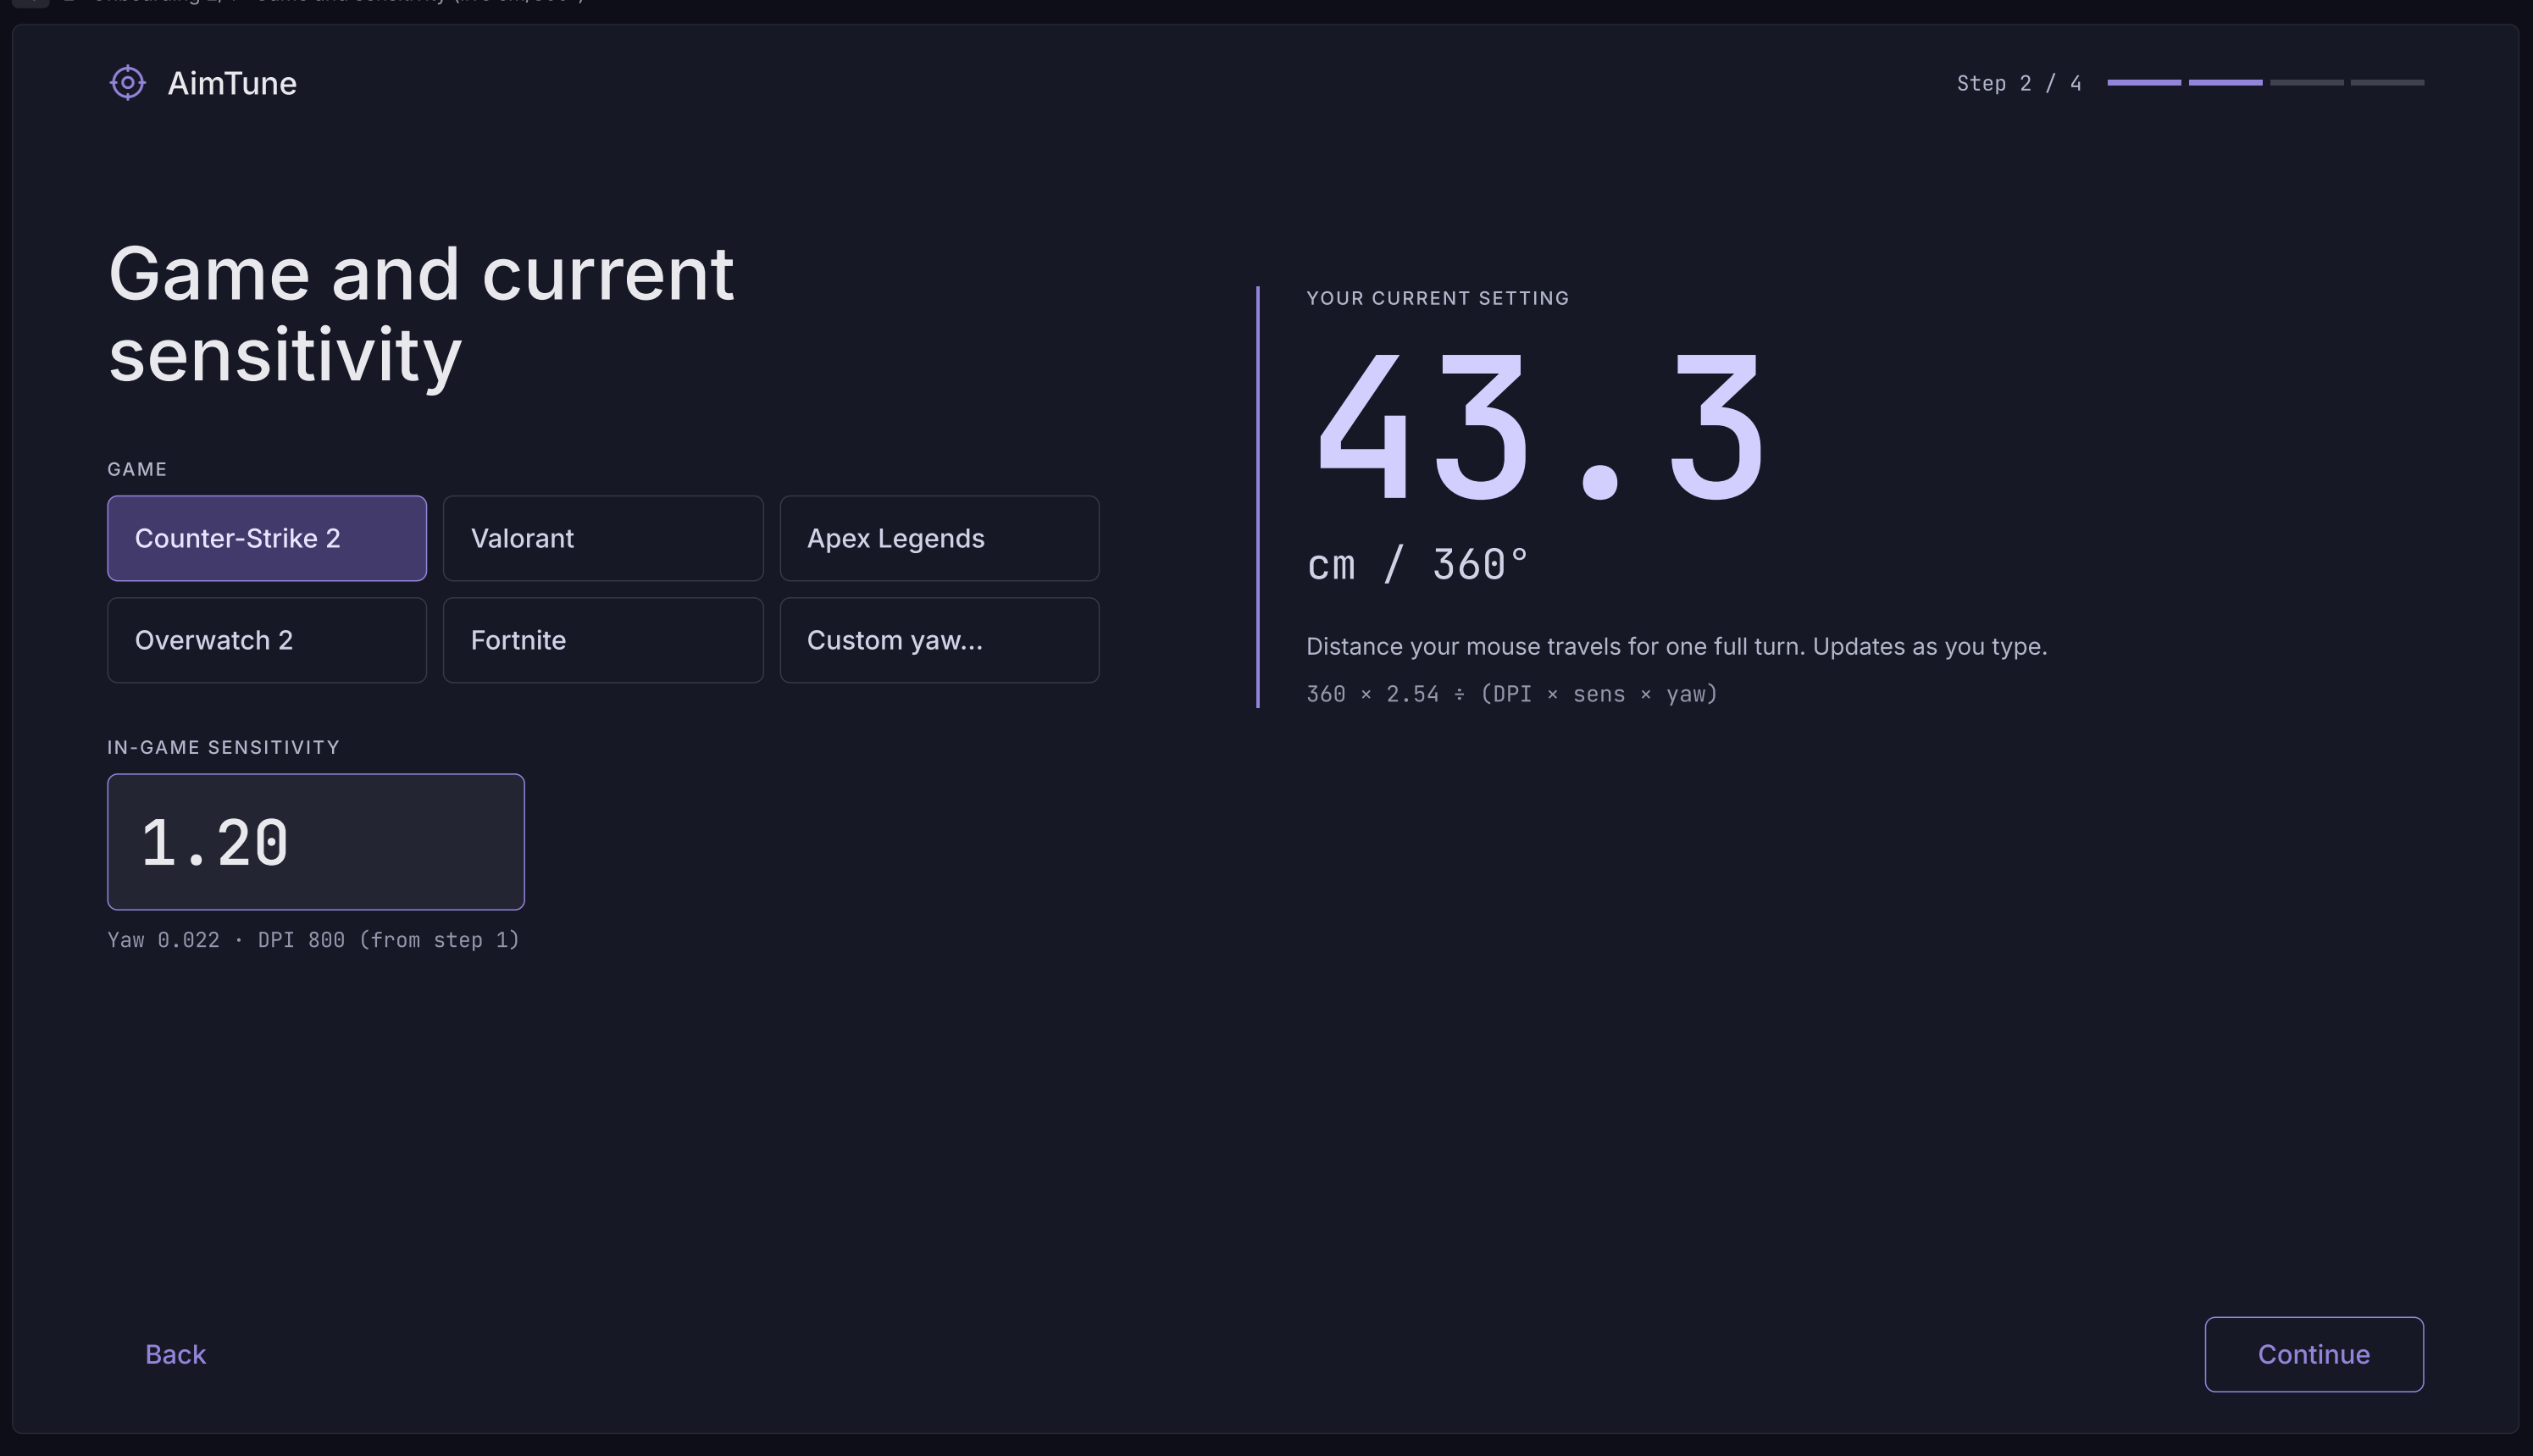
Use the value set in your mouse software, not an in-game multiplier. It converts sensitivity to physical distance.

DPI: 800

Not sure?

Check your mouse vendor app (G Hub, Synapse, Armoury Crate). If it shows "DPI", "CPI" or "Sensitivity stages", use the active stage.

1d 2 · Onboarding 2/4 · Game and sensitivity (live cm/360°)



Game and current sensitivity

GAME

IN-GAME SENSITIVITY: 1.20

Yaw 0.022 · DPI 800 (from step 1)

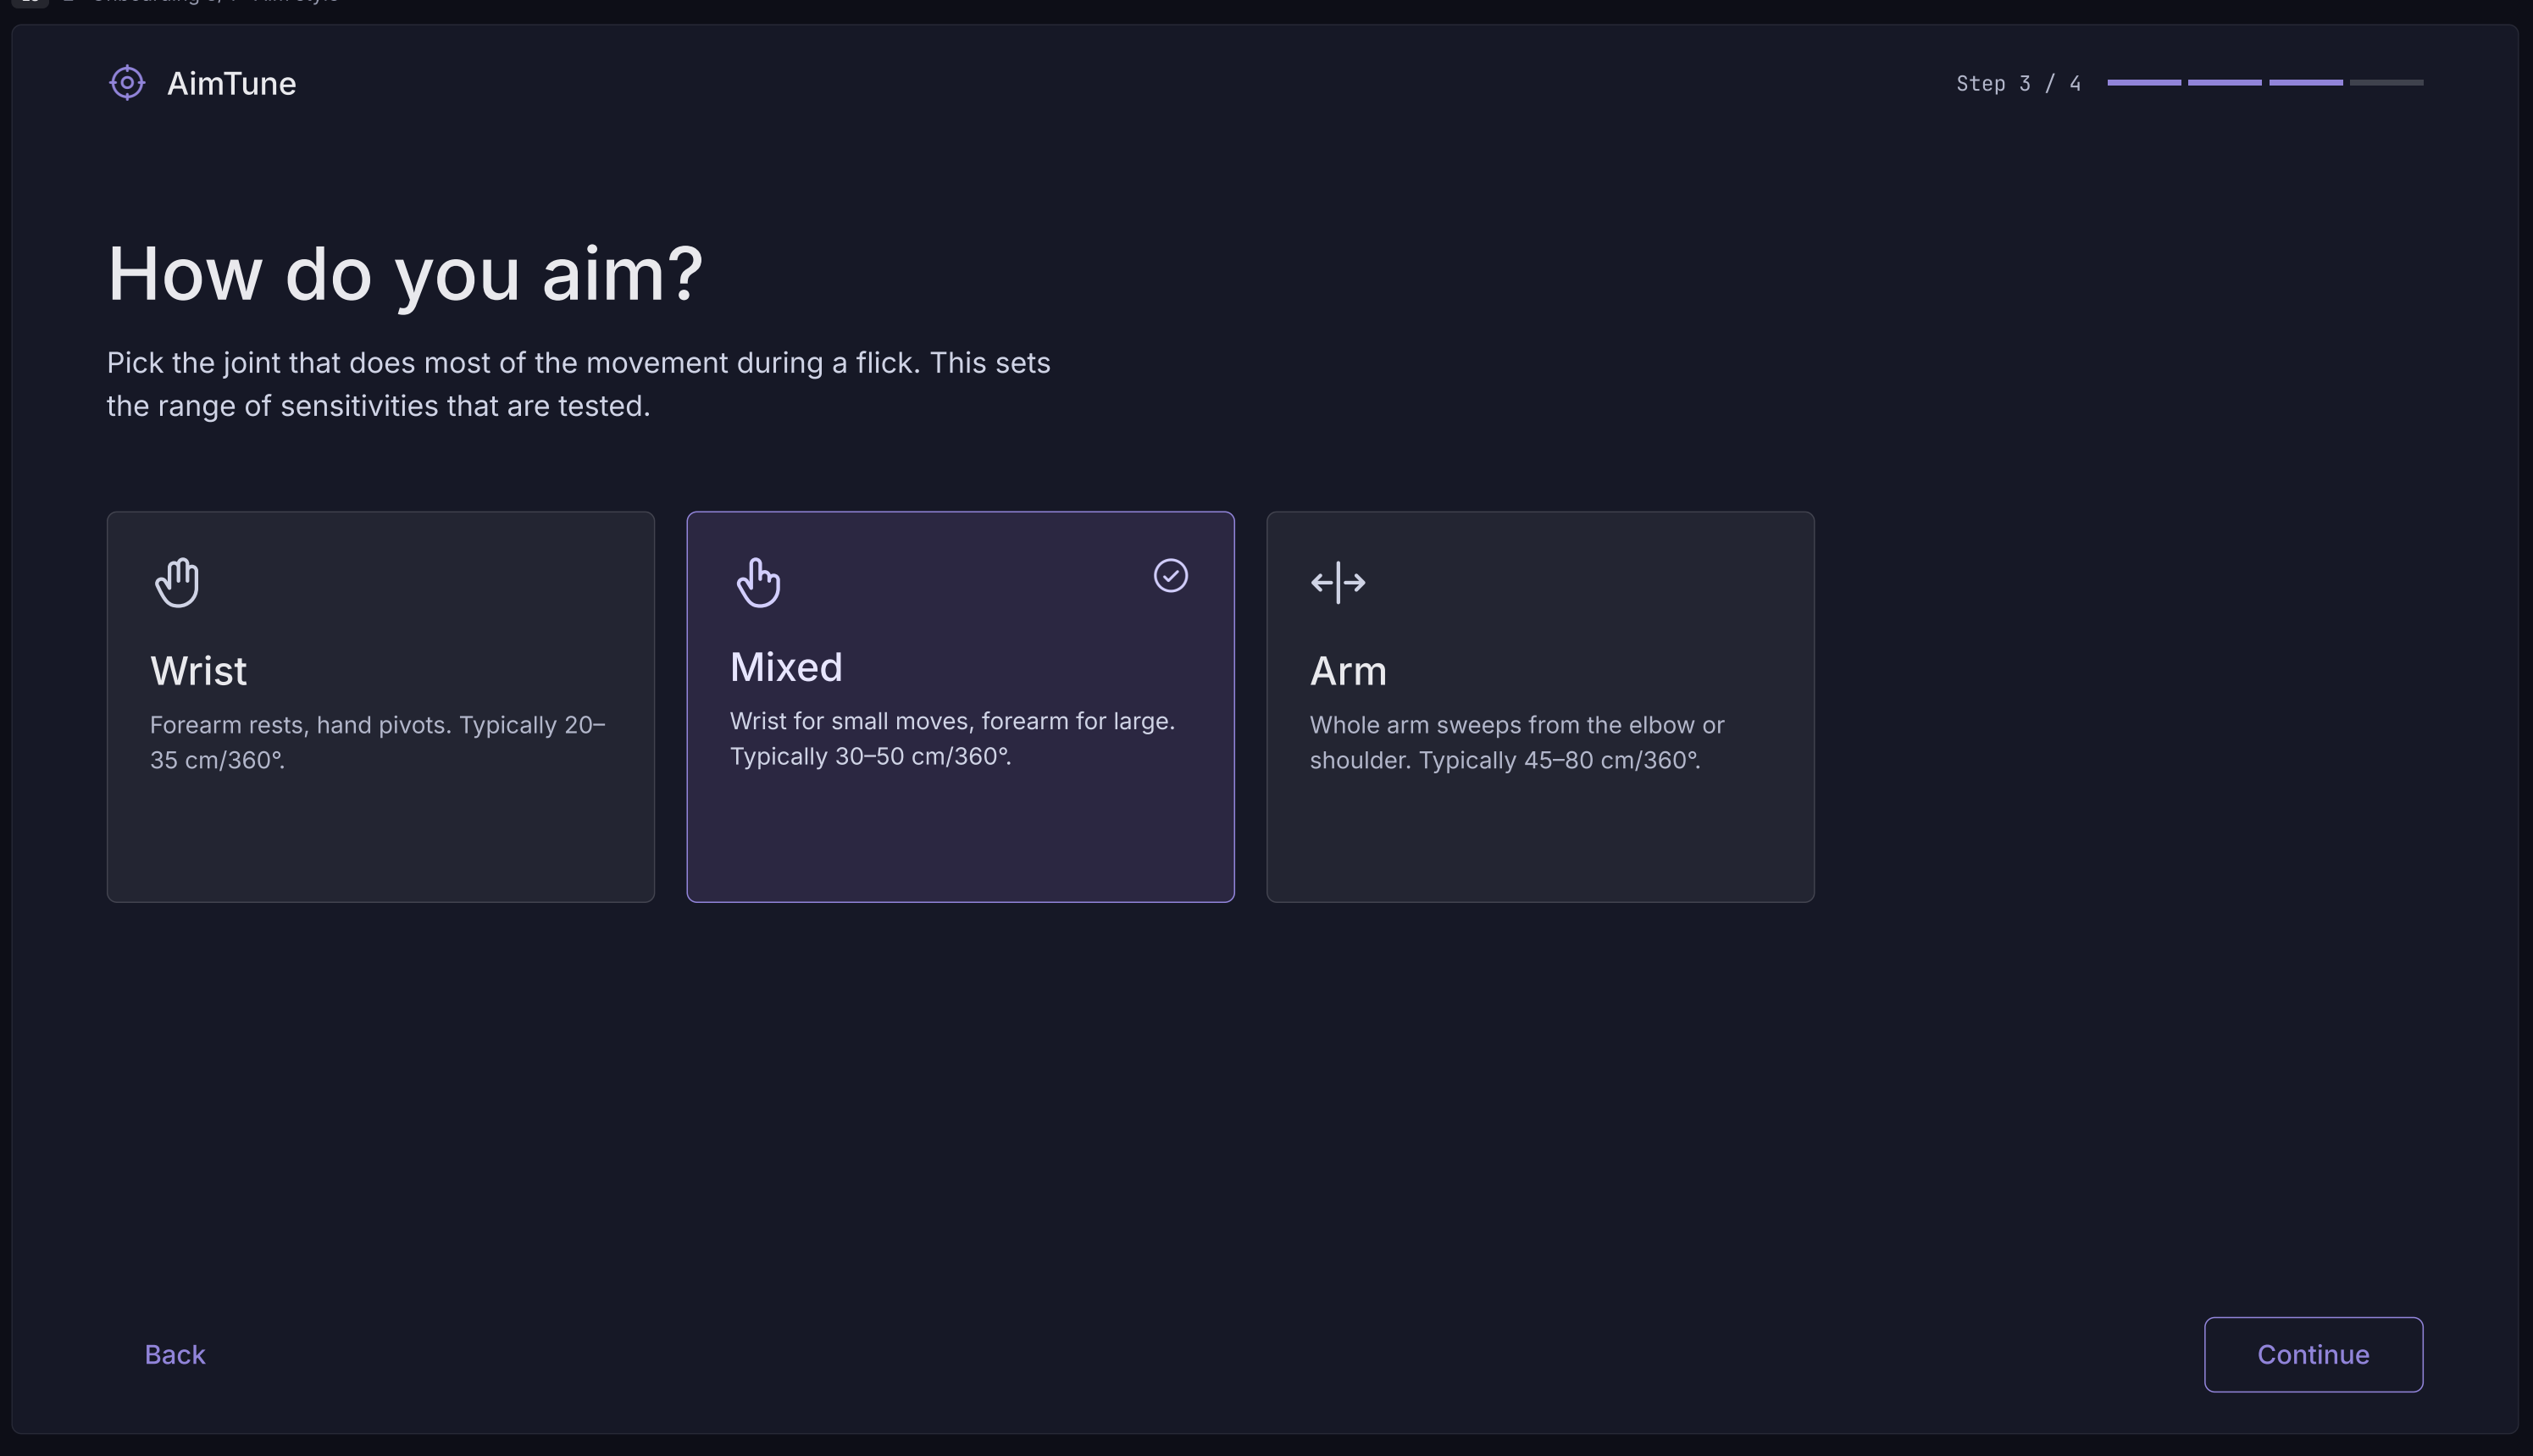
YOUR CURRENT SETTING

43.3 cm / 360°

Distance your mouse travels for one full turn. Updates as you type.

360 × 2.54 ÷ (DPI × sens × yaw)

1e 2 · Onboarding 3/4 · Aim style



How do you aim?

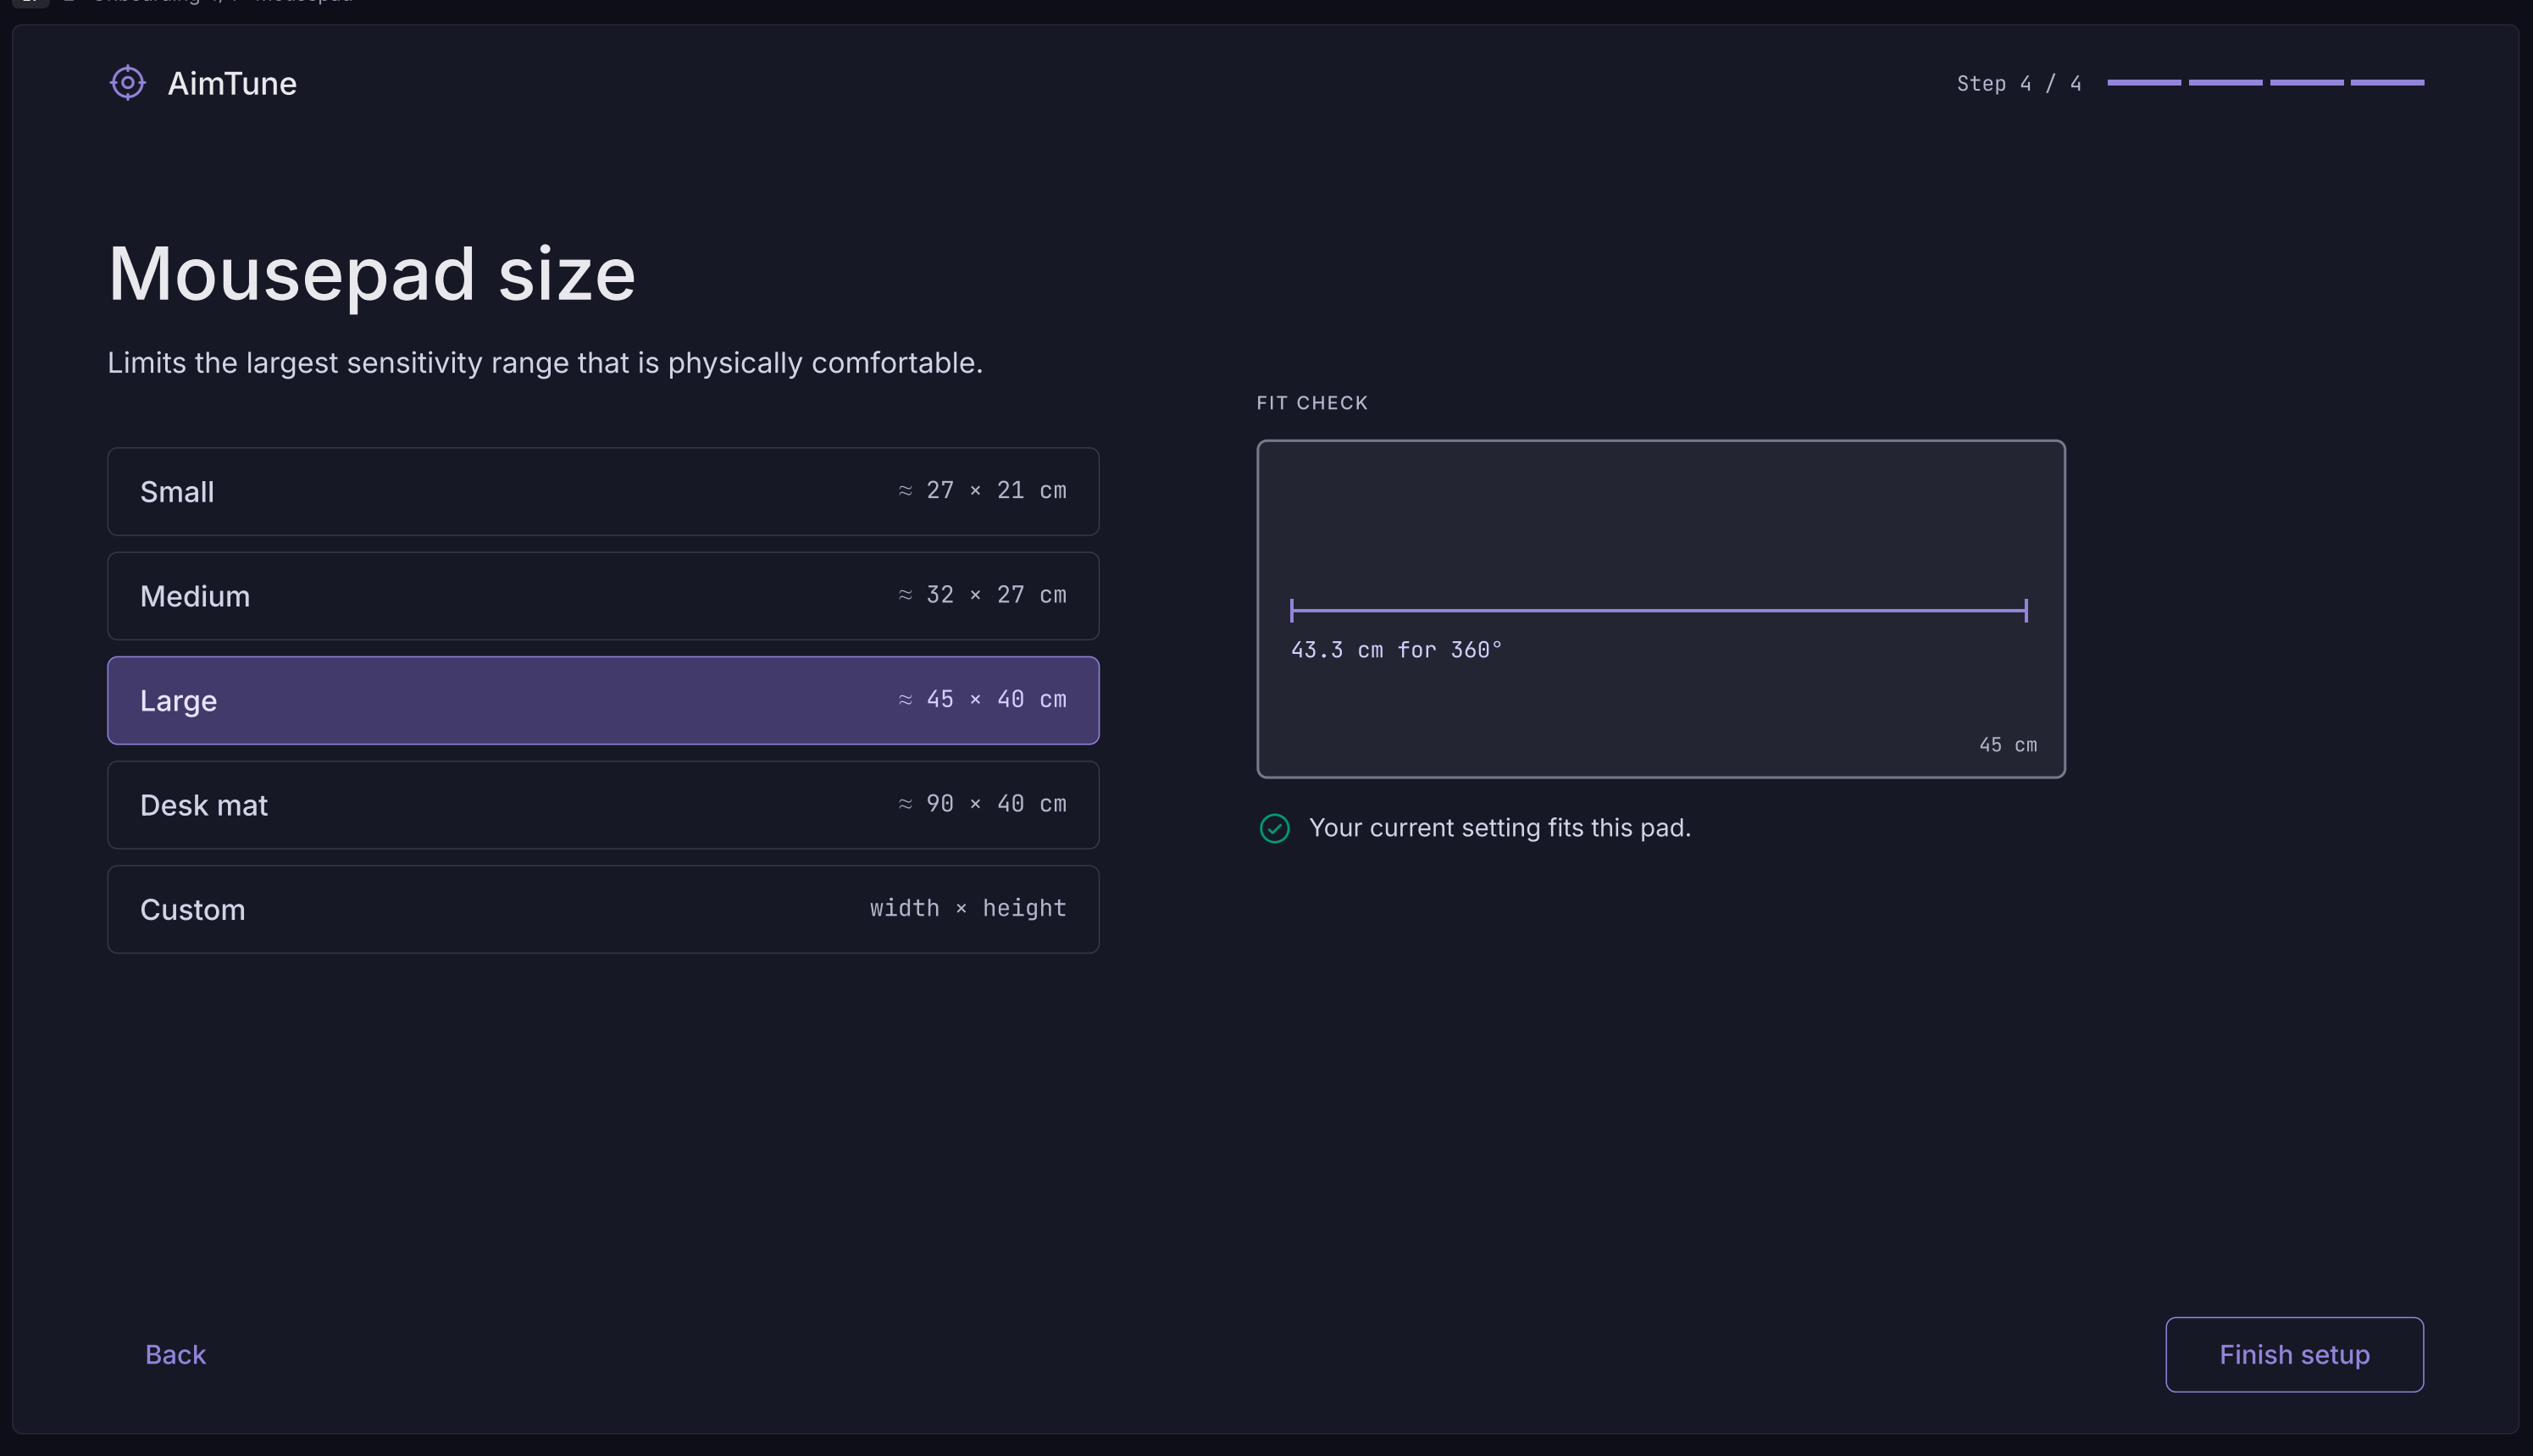
Pick the joint that does most of the movement during a flick. This sets the range of sensitivities that are tested.

Wrist Forearm rests, hand pivots. Typically 20–35 cm/360°.

Mixed Wrist for small moves, forearm for large. Typically 30–50 cm/360°.

Arm Whole arm sweeps from the elbow or shoulder. Typically 45–80 cm/360°.

1f 2 · Onboarding 4/4 · Mousepad



Mousepad size

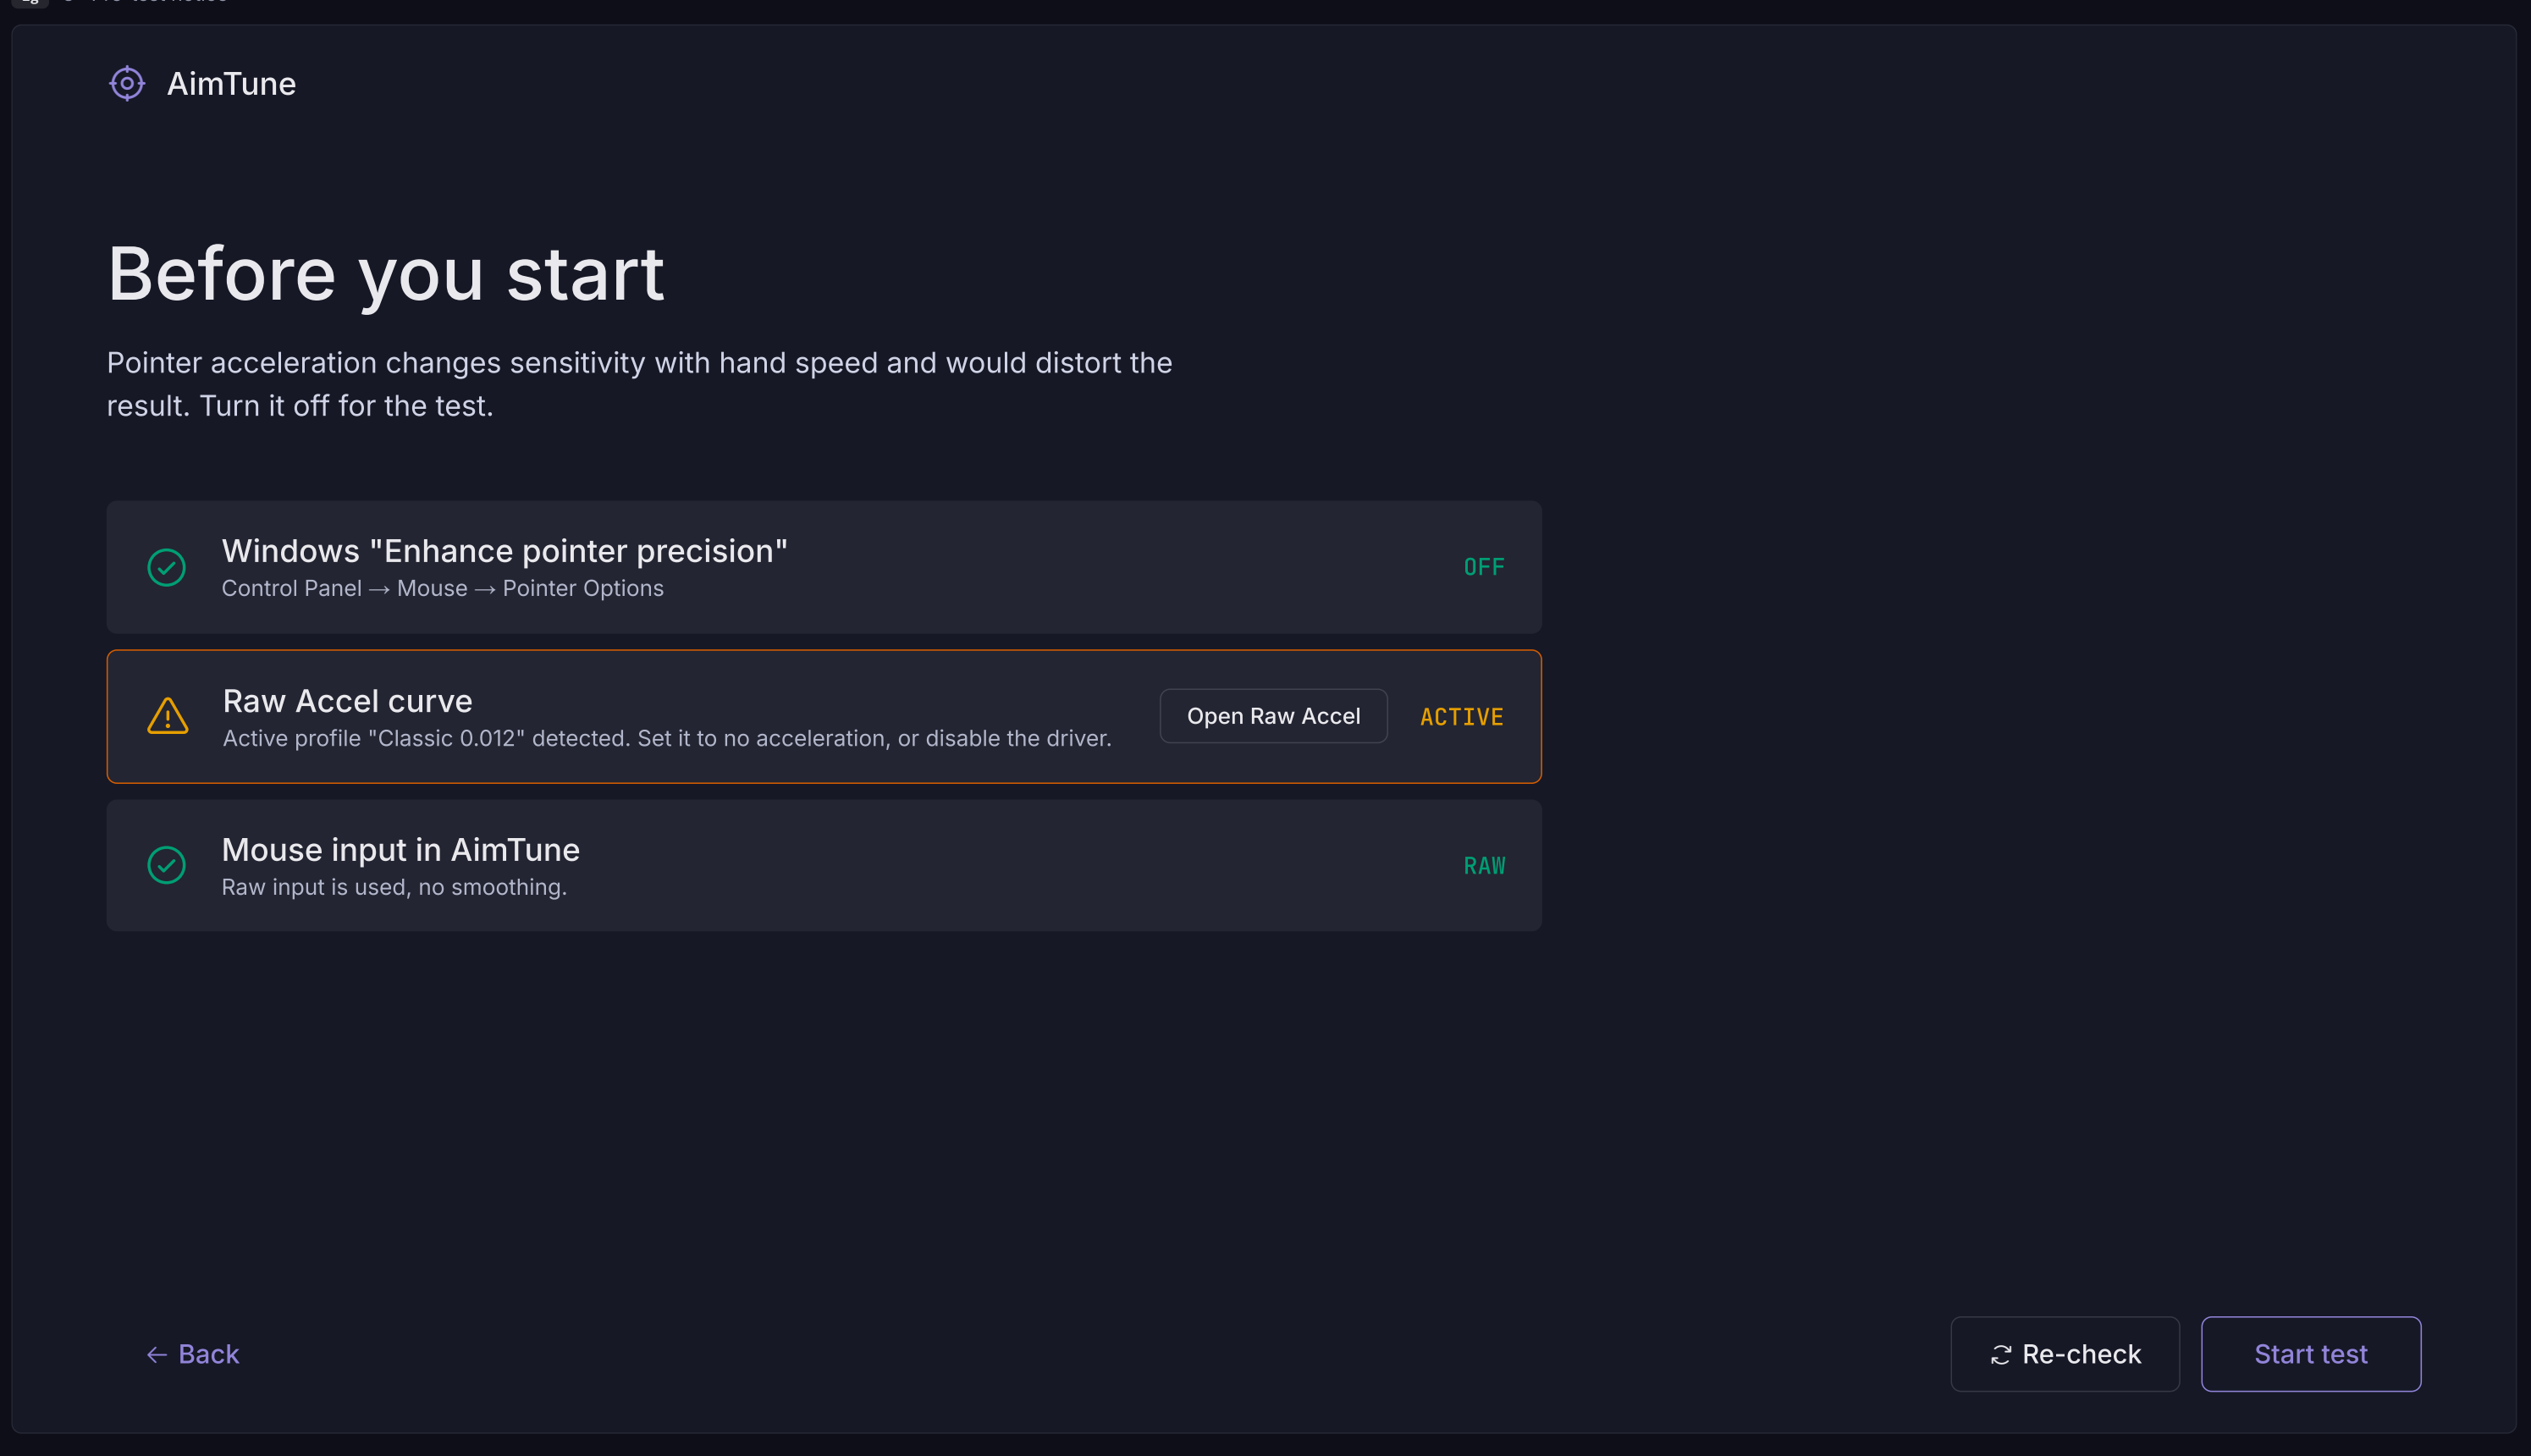
Limits the largest sensitivity range that is physically comfortable.

Small	≈ 27 × 21 cm
Medium	≈ 32 × 27 cm
Large	≈ 45 × 40 cm
Desk mat	≈ 90 × 40 cm
Custom	width × height

FIT CHECK

Your current setting fits this pad.

1g 3 · Pre-test notice



Before you start

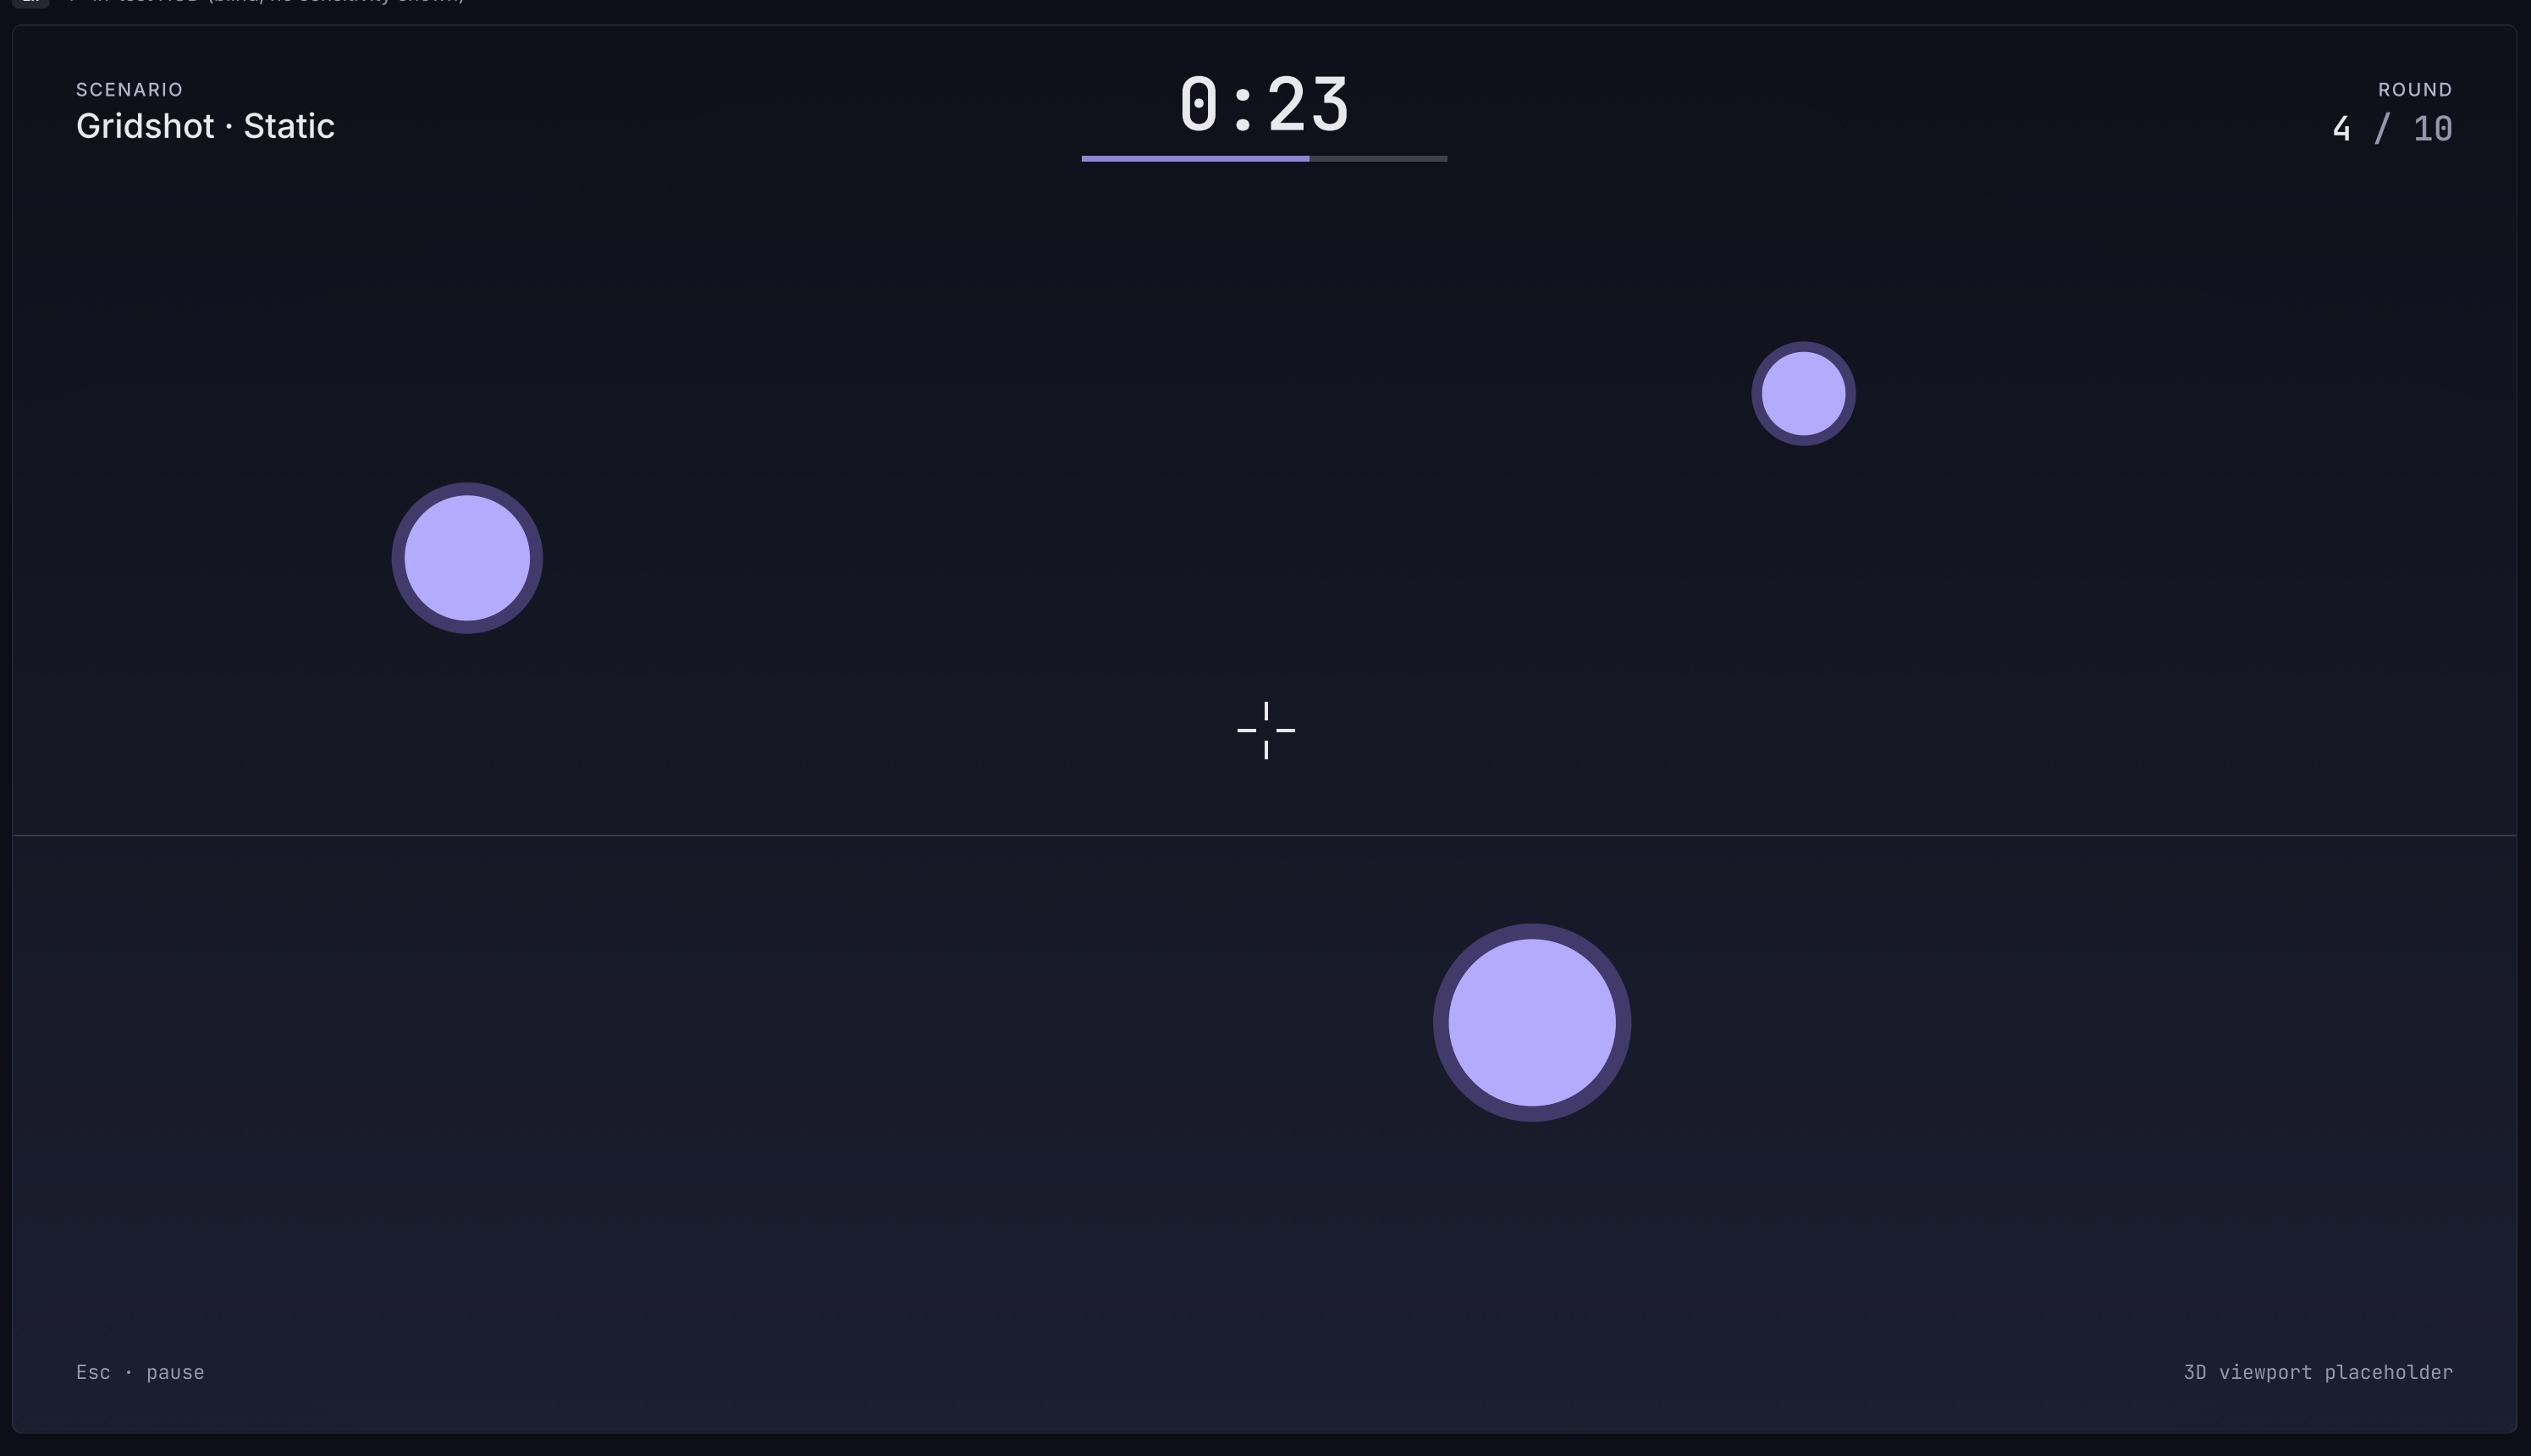
Pointer acceleration changes sensitivity with hand speed and would distort the result. Turn it off for the test.

Windows "Enhance pointer precision" — Control Panel → Mouse → Pointer Options — OFF

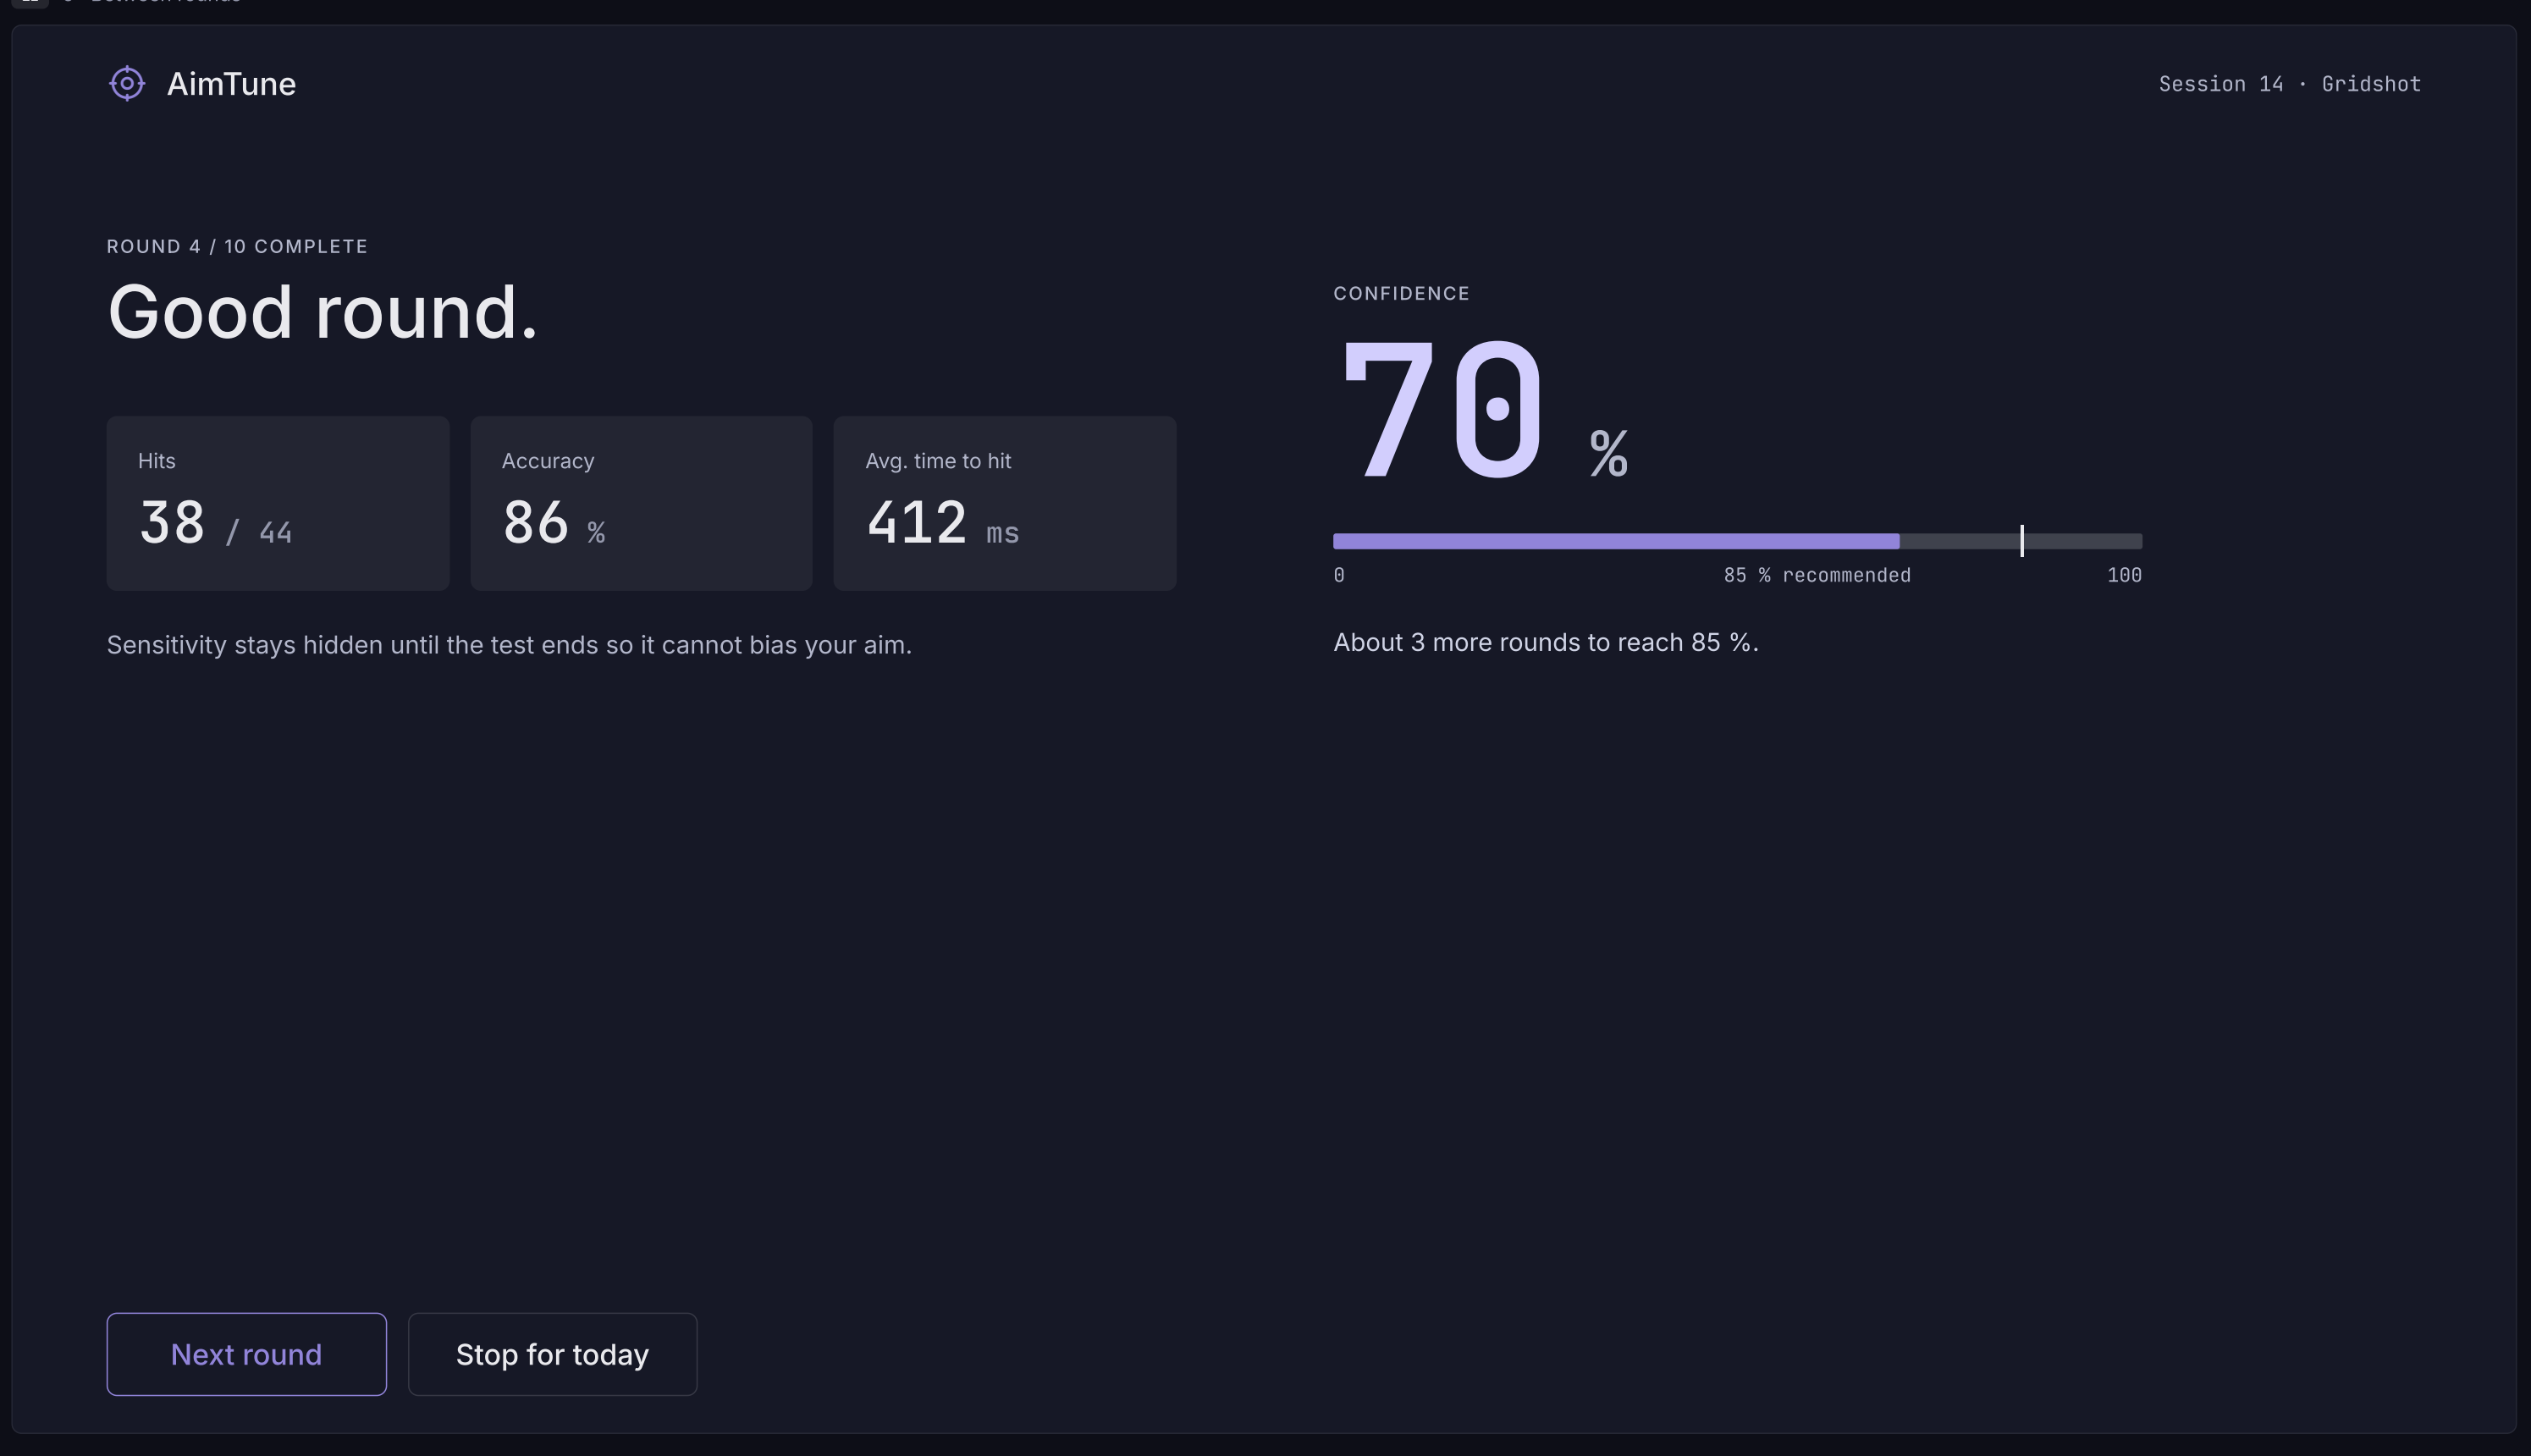
Raw Accel curve — Active profile "Classic 0.012" detected. Set it to no acceleration, or disable the driver. — Open Raw Accel — ACTIVE

Mouse input in AimTune — Raw input is used, no smoothing. — RAW

1h 4 · In-test HUD (blind, no sensitivity shown)



1i 5 · Between rounds



ROUND 4 / 10 COMPLETE

Good round.

Hits	Accuracy	Avg. time to hit
38 / 44	86 %	412 ms

Sensitivity stays hidden until the test ends so it cannot bias your aim.

CONFIDENCE

70 %

About 3 more rounds to reach 85 %.
